

## **Methodology of Determination of Need Methadone Medication-Assisted Treatment**

Department of Children and Families  
Office of Substance Abuse and Mental Health

## **I. INTRODUCTION**

The Office of Substance Abuse and Mental Health within the Department of Children and Families (Department) is the single state agency responsible for a statewide system of prevention, treatment, and recovery support services for individuals with or at risk of developing substance use disorders. This includes regulating substance abuse treatment services. In accordance with s. 397.427, F.S., the Department shall not license any new medication-assisted treatment programs for opioid addiction until it conducts a needs assessment to determine whether additional providers are needed in each Florida sub-state entity. The determination of need only applies to methadone medication-assisted treatment programs.

In determining need for additional methadone medication-assisted treatment programs, the following data will be examined:

- Population estimates for those ages 18 and older by county;
- Estimated number of individuals with Pain Reliever misuse or disorder in the past year;
- Estimated number of individuals with Heroin Use in the past year;
- Estimated number of individuals needing but not receiving treatment for Drug Use; and
- Data on treatment accessibility of existing and approved providers, specifically:
  - Clinic Capacity,
  - Average Daily Census, and
  - Service provision for indigent individuals eligible for publicly-funded services, pregnant women, and Medicaid recipients

The data examined will be used to determine whether and where there is a need for new methadone medication-assisted treatment programs.

## **II. NEEDS ASSESSMENT METHODOLOGY**

This methodology is based on data from the National Survey on Drug Use and Health (NSDUH), an annual survey sponsored by the Substance Abuse and Mental Health Services Administration (SAMHSA). The NSDUH collects data from a representative sample of the non-institutionalized household population through face-to-face interviews. The formula to determine unmet treatment need considers the estimated number of people who misuse/abuse/dependent on heroin or pain relievers who felt a need to get treatment but did not receive treatment, as well as provider reported treatment accessibility and program data.

## II.A. Data

Described below is the information that will be used in determining need.

- **Population Estimates:** Population estimates will be exported (Population: 18 and older by County) from the Florida Health Charts website at (<http://www.flhealthcharts.com/FLQUERY/Population/PopulationRpt.aspx>). These population estimates are provided by the Department of Health, Office of Health Statistics and Assessment in consultation with the Florida Legislature's Office of Economic and Demographic Research.
- **Estimated number of individuals with Pain Reliever Misuse or Disorder in the past year:** The estimated number of individuals with Pain Reliever Use Misuse or Disorder is derived from the NSDUH. Pain Reliever Use Disorder is defined as meeting criteria for pain reliever dependence or abuse. Misuse of prescription psychotherapeutics (including pain relievers) is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs. The estimated number of individuals with Pain Reliever Use Misuse or Disorder is based on a multiple year pooling of data that produce state and sub-state level percentage estimate. This percentage is applied to the county population estimates to give an estimated number of individuals with Pain Reliever Use Misuse or Disorder.  
Source: <https://www.samhsa.gov/data/data-we-collect/nsduh-national-survey-drug-use-and-health>
- **Estimated number of individuals with Heroin Use in the past year:** The estimated number of individuals with Heroin Use is derived from the NSDUH. The assumption is made that all individuals with past year Heroin Use need treatment. The estimated number of individuals with heroin use is based on a multiple year pooling of data that produce state and sub-state level percentage estimate. This percentage is then applied to the county population estimates to give an estimated number of individuals with heroin use.  
Source: <https://www.samhsa.gov/data/data-we-collect/nsduh-national-survey-drug-use-and-health>
- **Past year estimated number of individuals needing but not receiving treatment for Drug Use:** The estimated number of individuals who had need for treatment but did not receive treatment in the past year for Drug Use is derived from the NSDUH. The estimated number is based on a multiple year pooling of data that produce a national, state, or sub-state percentage estimate. Individuals are classified as needing treatment for a drug problem if they met the criteria for illicit drug use, dependence, or abuse. Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens,

inhalants, or methamphetamine. Needing But Not Receiving Treatment refers to individuals classified as needing treatment for drugs, but have not received treatment for a drug problem at a specialty facility.

Source: <https://rdas.samhsa.gov/#/>

- **Treatment Accessibility Data:**

The following data will be gathered from the Department-approved Central Registry and Licensure Database where approved providers self-report.

- Clinic capacity is defined as the maximum number of active individuals that can be in treatment per provider. Standardized reporting of clinic capacity is recorded in Licensure Database for all providers. Data will reflect clinic capacity as it was reported by the provider. The Central Registry does not anticipate projected year clinic capacity. Clinic capacity is self-reported by the provider.
- Average daily census is defined as the average total number of individuals in treatment. Standardized reporting of average census is recorded in the Central Registry for all providers. Data will reflect clinic census as it stands for the previous 12 months from collection date.

## **II.B. Formulas and Determination of Need**

The formula used in this needs assessment uses the above variables as follows:

- Population estimates for those 18 and older by county were obtained (POP).
- Estimated Number with Past Year Pain Relieve Misuse or Disorder (NPRMD):
  - Estimated percentage of individuals with Pain Reliever Misuse or Disorder (PPRMD) is applied to the county population estimates to give an estimated number of individuals with Pain Reliever Misuse or Disorder.

$$(PPRMD * POP) = NPRMD$$

- Estimated Number with Past Year Heroin Use (NHU):
  - Estimated percentage of individuals with Heroin Use (PHU) is applied to the county population estimates to give an estimated number of individuals with Heroin Use.

$$(PHU * POP) = NHU$$

- Total Individuals with Use/Disorders (TIUD):
  - Combine the Estimated Numbers of Pain Reliever Use Disorder and Heroin Use.

$$(NPRMD + NHU) = \text{Total Individuals with Use/Disorders (TIUD)}$$

- Unmet Treatment need (UNMET):
  - Estimated percentage of individuals needing but not receiving treatment for Drug Use/Disorder (NOTREAT) is applied to the total number of individuals with a use/disorder (TIUD).

$$(TIUD * NOTREAT) = UNMET$$

- Remaining County Treatment Capacity (RTC):
  - Combine providers clinic capacity to have a county capacity (TCC) and subtract the combined average daily census (ADC)

$$(TCC - ADC) = RTC$$

The Department will determine need for each county by entering values for each data point as described.

- If UNMET minus RTC is < 60, then additional clinics are not needed.
- If UNMET is not greater than RTC, then additional clinics are not needed, unless the existing clinic(s) do not serve individuals who are indigent and eligible for publicly-funded services, pregnant women, and Medicaid recipients and then an additional clinic which serves these populations is needed.
- If UNMET minus RTC is > 60, then additional clinics are needed, at least one of which must serve individuals who are indigent and eligible for publicly-funded services, pregnant women, and Medicaid recipients.
- Determination of number of additional clinics needed:
  - If UNMET is not greater than RTC, but the existing clinic(s) do not serve individuals who are indigent and eligible for publicly-funded services, pregnant women, and Medicaid recipients and then one additional clinic which serves these populations is needed.
  - If UNMET minus RTC is > 60, then determine average clinic capacity (ACC) by adding the provider capacity of all full clinics and divide by the number of full clinics.
    - Divide (UNMET-RTC) by average clinic capacity (ACC)
    - $((UNMET-RTC)/ACC) = \text{Number of additional clinics needed per county}$

| Treatment providers combined Average |                                               |

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine.

Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

| Wyoming        | 1.87              | (1.58 - 2.20)                    | 4.45                | (3.59 - 5.50)                      | 7.28                | (5.81 - 9.10)                      | 0.50              | (0.34 - 0.73)                    | 1.42              | (1.16 - 1.74)                    |

NOTE: Average annual initiation of marijuana (%) =  $100 * \{[X_1 \div (0.5 * X_1 + X_2)] \div 2\}$ , where  $X_1$  is the number of marijuana initiates in the past 24 months and  $X_2$  is the number of individuals who never used marijuana (with the at-risk population defined as  $0.5 * X_1 + X_2$ ). Both of the computation components,  $X_1$  and  $X_2$ , are based on a survey-weighted hierarchical Bayes estimation approach. The age group shown is based on a respondent's age at the time of the interview, not his or her age at first use. For details, see Section B of the "2016-2017 NSDUH: Guide to State Tables and Summary of Small Area Estimation Methodology" at <https://www.samhsa.gov/data/>.

NOTE: The state and census region Bayesian confidence (credible) intervals presented above use a simultaneous solution for the First Use of Marijuana and Never Used Marijuana outcomes, which had age group-specific random effects that were allowed to be correlated across the two outcomes. The associated Markov Chain Monte Carlo chains were used to calculate the posterior variance. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Illicit Drug Use Other Than Marijuana Use includes the misuse of prescription psychotherapeutics or the use of cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

| Utah           | 83.91             | (82.19 - 85.49)                     | 66.40               | (62.73 - 69.88)                       | 81.75               | (78.63 - 84.50)                       | 87.36             | (85.37 - 89.11)                     | 86.33             | (84.50 - 87.97)                     |
| Vermont        | 84.69             | (82.76 - 86.45)                     | 64.37               | (60.79 - 67.79)                       | 80.56               | (76.94 - 83.73)                       | 87.38             | (85.16 - 89.31)                     | 86.37             | (84.30 - 88.20)                     |
| Virginia       | 85.61             | (84.15 - 86.96)                     | 65.92               | (62.90 - 68.82)                       | 81.02               | (78.39 - 83.40)                       | 88.56             | (86.87 - 90.06)                     | 87.52             | (85.96 - 88.93)                     |
| Washington     | 81.28             | (79.19 - 83.20)                     | 60.23               | (56.50 - 63.84)                       | 77.58               | (74.04 - 80.76)                       | 84.13             | (81.69 - 86.30)                     | 83.26             | (81.02 - 85.28)                     |
| West Virginia  | 89.63             | (88.20 - 90.90)                     | 66.33               | (62.73 - 69.76)                       | 85.50               | (82.64 - 87.97)                       | 92.58             | (90.98 - 93.91)                     | 91.67             | (90.17 - 92.96)                     |
| Wisconsin      | 85.62             | (83.91 - 87.18)                     | 63.76               | (60.32 - 67.06)                       | 81.11               | (78.00 - 83.87)                       | 88.88             | (86.92 - 90.58)                     | 87.78             | (85.95 - 89.41)                     |
| Wyoming        | 85.71             | (84.00 - 87.26)                     | 64.45               | (60.81 - 67.93)                       | 82.17               | (79.18 - 84.81)                       | 88.74             | (86.77 - 90.45)                     | 87.83             | (86.01 - 89.45)                     |

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion (i.e., at the same time or within a couple of hours of each other) on at least 1 day in the past 30 days.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

| Washington     | 18.70                                   | (16.44 - 21.20)                                        | 10.98                                         | (9.35 - 12.86)                                               |
| West Virginia  | 20.38                                   | (17.98 - 23.02)                                        | 13.04                                         | (11.22 - 15.11)                                              |
| Wisconsin      | 23.26                                   | (20.88 - 25.82)                                        | 15.01                                         | (13.07 - 17.18)                                              |
| Wyoming        | 21.56                                   | (19.10 - 24.25)                                        | 13.11                                         | (11.33 - 15.13)                                              |

NOTE: Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion (i.e., at the same time or within a couple of hours of each other) on at least 1 day in the past 30 days.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Tobacco Products include cigarettes, smokeless tobacco (i.e., snuff, dip, chewing tobacco, or "snus"), cigars, or pipe tobacco.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Illicit Drug Use Disorder is defined as meeting criteria for illicit drug dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Pain Reliever Use Disorder is defined as meeting criteria for pain reliever dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Alcohol Use Disorder is defined as meeting criteria for alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV).

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Substance Use Disorder is defined as meeting criteria for illicit drug or alcohol dependence or abuse. Dependence or abuse is based on definitions found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*.

NOTE: Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Respondents were classified as needing illicit drug treatment if they met the criteria for an illicit drug use disorder as defined in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV) or received treatment for illicit drug use at a specialty facility (i.e., drug and alcohol rehabilitation facility [inpatient or outpatient], hospital [inpatient only], or mental health center). Needing But Not Receiving Illicit Drug Treatment refers to respondents who are classified as needing illicit drug treatment, but who did not receive illicit drug treatment at a specialty facility. Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Respondents were classified as needing alcohol treatment if they met the criteria for an alcohol use disorder as defined in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV) or received treatment for alcohol use at a specialty facility (i.e., drug and alcohol rehabilitation facility [inpatient or outpatient], hospital [inpatient only], or mental health center). Needing But Not Receiving Alcohol Treatment refers to respondents who are classified as needing alcohol treatment, but who did not receive alcohol treatment at a specialty facility.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Respondents were classified as needing substance use treatment if they met the criteria for an illicit drug or alcohol use disorder as defined in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV) or received treatment for illicit drug or alcohol use at a specialty facility (i.e., drug and alcohol rehabilitation facility [inpatient or outpatient], hospital [inpatient only], or mental health center). Needing But Not Receiving Substance Use Treatment refers to respondents who are classified as needing illicit drug or alcohol treatment, but who did not receive illicit drug or alcohol treatment at a specialty facility. Illicit Drug Use includes the misuse of prescription psychotherapeutics or the use of marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine. Misuse of prescription psychotherapeutics is defined as use in any way not directed by a doctor, including use without a prescription of one's own; use in greater amounts, more often, or longer than told; or use in any other way not directed by a doctor. Prescription psychotherapeutics do not include over-the-counter drugs.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

**Table 27 Serious Mental Illness in the Past Year, by Age Group and State: Percentages, Annual Averages Based on 2016 and 2017 NSDUHs (continued)**

| State          | 18+<br>(Estimate) | 18+<br>(95% Confidence<br>Interval) | 18-25<br>(Estimate) | 18-25<br>(95% Confidence<br>Interval) | 26+<br>(Estimate) | 26+<br>(95% Confidence<br>Interval) |
|----------------|-------------------|-------------------------------------|---------------------|---------------------------------------|-------------------|-------------------------------------|
| Nebraska       | 4.30              | (3.58 - 5.15)                       | 6.58                | (5.21 - 8.27)                         | 3.89              | (3.13 - 4.83)                       |
| Nevada         | 4.28              | (3.46 - 5.28)                       | 6.49                | (5.05 - 8.30)                         | 3.96              | (3.10 - 5.04)                       |
| New Hampshire  | 5.28              | (4.36 - 6.38)                       | 8.90                | (7.12 - 11.08)                        | 4.72              | (3.76 - 5.92)                       |
| New Jersey     | 3.67              | (3.04 - 4.44)                       | 6.31                | (5.03 - 7.89)                         | 3.28              | (2.62 - 4.11)                       |
| New Mexico     | 4.39              | (3.57 - 5.39)                       | 6.29                | (4.91 - 8.02)                         | 4.08              | (3.20 - 5.18)                       |
| New York       | 3.83              | (3.30 - 4.45)                       | 5.87                | (4.89 - 7.04)                         | 3.50              | (2.93 - 4.17)                       |
| North Carolina | 4.66              | (3.96 - 5.49)                       | 6.27                | (5.09 - 7.70)                         | 4.41              | (3.64 - 5.33)                       |
| North Dakota   | 4.61              | (3.85 - 5.51)                       | 7.39                | (5.88 - 9.25)                         | 4.03              | (3.23 - 5.02)                       |
| Ohio           | 4.95              | (4.33 - 5.66)                       | 7.60                | (6.44 - 8.95)                         | 4.53              | (3.86 - 5.31)                       |
| Oklahoma       | 4.99              | (4.13 - 6.02)                       | 7.04                | (5.54 - 8.92)                         | 4.64              | (3.71 - 5.78)                       |
| Oregon         | 5.37              | (4.51 - 6.39)                       | 8.32                | (6.71 - 10.28)                        | 4.93              | (4.02 - 6.04)                       |
| Pennsylvania   | 4.44              | (3.85 - 5.12)                       | 6.66                | (5.57 - 7.94)                         | 4.10              | (3.47 - 4.84)                       |
| Rhode Island   | 4.52              | (3.75 - 5.44)                       | 7.07                | (5.61 - 8.87)                         | 4.06              | (3.25 - 5.08)                       |
| South Carolina | 4.36              | (3.59 - 5.29)                       | 6.12                | (4.84 - 7.71)                         | 4.09              | (3.26 - 5.11)                       |
| South Dakota   | 4.44              | (3.72 - 5.31)                       | 7.48                | (6.03 - 9.26)                         | 3.93              | (3.15 - 4.89)                       |
| Tennessee      | 5.19              | (4.36 - 6.18)                       | 7.12                | (5.66 - 8.93)                         | 4.89              | (3.99 - 5.97)                       |
| Texas          | 3.76              | (3.28 - 4.31)                       | 5.90                | (4.95 - 7.01)                         | 3.38              | (2.87 - 3.98)                       |
| Utah           | 6.18              | (5.21 - 7.31)                       | 9.51                | (7.52 - 11.96)                        | 5.43              | (4.42 - 6.65)                       |
| Vermont        | 5.41              | (4.48 - 6.52)                       | 7.78                | (6.14 - 9.83)                         | 5.00              | (4.00 - 6.23)                       |
| Virginia       | 4.01              | (3.38 - 4.76)                       | 5.99                | (4.84 - 7.39)                         | 3.70              | (3.02 - 4.52)                       |
| Washington     | 5.37              | (4.43 - 6.50)                       | 7.01                | (5.52 - 8.87)                         | 5.12              | (4.11 - 6.37)                       |
| West Virginia  | 5.69              | (4.72 - 6.83)                       | 7.55                | (6.06 - 9.37)                         | 5.41              | (4.38 - 6.68)                       |
| Wisconsin      | 4.88              | (4.11 - 5.80)                       | 7.53                | (6.02 - 9.38)                         | 4.45              | (3.63 - 5.44)                       |
| Wyoming        | 4.84              | (4.05 - 5.78)                       | 7.66                | (6.14 - 9.52)                         | 4.39              | (3.55 - 5.42)                       |

NOTE: Serious mental illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). SMI includes individuals with diagnoses resulting in serious functional impairment. For details, see Section B of the "2016-2017 NSDUH: Guide to State Tables and Summary of Small Area Estimation Methodology" at <https://www.samhsa.gov/data/>.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

| Virginia       | 18.78             | (17.18 - 20.50)                     | 25.39               | (22.75 - 28.23)                       | 17.72             | (15.92 - 19.68)                     |
| Washington     | 22.81             | (20.50 - 25.31)                     | 24.81               | (21.49 - 28.46)                       | 22.51             | (19.91 - 25.33)                     |
| West Virginia  | 22.89             | (20.69 - 25.25)                     | 23.96               | (20.82 - 27.41)                       | 22.73             | (20.27 - 25.39)                     |
| Wisconsin      | 18.54             | (16.67 - 20.58)                     | 25.53               | (22.38 - 28.95)                       | 17.40             | (15.34 - 19.66)                     |
| Wyoming        | 20.25             | (18.22 - 22.44)                     | 26.55               | (23.42 - 29.93)                       | 19.25             | (16.97 - 21.76)                     |

NOTE: Any mental illness (AMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). For details, see Section B of the "2016-2017 NSDUH: Guide to State Tables and Summary of Small Area Estimation Methodology" at <https://www.samhsa.gov/data/>.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Mental Health Services are defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

| West Virginia  | 4.75              | (3.87 - 5.81)                       | 10.01               | (8.16 - 12.21)                        | 3.99              | (3.07 - 5.16)                       |
| Wisconsin      | 4.60              | (3.77 - 5.59)                       | 10.87               | (8.94 - 13.16)                        | 3.57              | (2.74 - 4.63)                       |
| Wyoming        | 4.39              | (3.60 - 5.35)                       | 10.57               | (8.69 - 12.81)                        | 3.41              | (2.63 - 4.42)                       |

NOTE: Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Major depressive episode (MDE) is defined as in the 5th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which specifies a period of at least 2 weeks when an individual experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. For details, see Section B of the "2016-2017 NSDUH: Guide to State Tables and Summary of Small Area Estimation Methodology" at <https://www.samhsa.gov/data/>.

NOTE: There are minor wording differences in the questions in the adult and adolescent MDE modules. Therefore, data from youths aged 12 to 17 were not combined with data from adults aged 18 or older to produce an estimate for those aged 12 or older.

NOTE: State and census region estimates, along with the 95 percent Bayesian confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

SPA = service planning area.

\* Low precision; no estimate reported.

NOTE: For substate region definitions, see the "2014-2016 National Survey on Drug Use and Health Substate Region Definitions" at <https://www.samhsa.gov/data/>.

NOTE: Substate, state, and census region estimates, along with the 95 percent confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and are generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

SPA = service planning area.

\* Low precision; no estimate reported.

NOTE: For substate region definitions, see the "2014-2016 National Survey on Drug Use and Health Substate Region Definitions" at <https://www.samhsa.gov/data/>.

NOTE: Substate, state, and census region estimates, along with the 95 percent confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and are generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

SPA = service planning area.

\* Low precision; no estimate reported.

NOTE: For substate region definitions, see the "2014-2016 National Survey on Drug Use and Health Substate Region Definitions" at <https://www.samhsa.gov/data/>.

NOTE: The substate, state, and census region Bayesian confidence (credible) intervals presented here use a simultaneous solution for the First Use of Marijuana and Never Used Marijuana outcomes, which had age group-specific random effects that were allowed to be correlated across the two outcomes. The associated Markov Chain Monte Carlo chains were used to calculate the posterior variance. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: *Average annual initiation of marijuana (%)* =  $100 * \{[X_1 \div (0.5 * X_1 + X_2)] \div 2\}$ , where  $X_1$  is the number of marijuana initiates in the past 24 months and  $X_2$  is the number of individuals who never used marijuana (with the at-risk population defined as  $0.5 * X_1 + X_2$ ). Both of the computation components,  $X_1$  and  $X_2$ , are based on a survey-weighted hierarchical Bayes estimation approach. The age group shown is based on a respondent's age at the time of the interview, not his or her age at first use. For details, see Section B of the "2015-2016 NSDUH: Guide to State Tables and Summary of Small Area Estimation Methodology" at <https://www.samhsa.gov/data/>.

SPA = service planning area.

\* Low precision; no estimate reported.

NOTE: For substate region definitions, see the "2014-2016 National Survey on Drug Use and Health Substate Region Definitions" at <https://www.samhsa.gov/data/>.

NOTE: Substate, state, and census region estimates, along with the 95 percent confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and are generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

SPA = service planning area.

\* Low precision; no estimate reported.

NOTE: For substate region definitions, see the "2014-2016 National Survey on Drug Use and Health Substate Region Definitions" at <https://www.samhsa.gov/data/>.

NOTE: Substate, state, and census region estimates, along with the 95 percent confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and are generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

SPA = service planning area.

\* Low precision; no estimate reported.

NOTE: For substate region definitions, see the "2014-2016 National Survey on Drug Use and Health Substate Region Definitions" at <https://www.samhsa.gov/data/>.

NOTE: Substate, state, and census region estimates, along with the 95 percent confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and are generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

SPA = service planning area.

\* Low precision; no estimate reported.

NOTE: For substate region definitions, see the "2014-2016 National Survey on Drug Use and Health Substate Region Definitions" at <https://www.samhsa.gov/data/>.

NOTE: Substate, state, and census region estimates, along with the 95 percent confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and are generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.

NOTE: Tobacco Products include cigarettes, smokeless tobacco (i.e., snuff, dip, chewing tobacco, or "snus"), cigars, or pipe tobacco.

SPA = service planning area.

\* Low precision; no estimate reported.

NOTE: For substate region definitions, see the "2014-2016 National Survey on Drug Use and Health Substate Region Definitions" at <https://www.samhsa.gov/data/>.

NOTE: Substate, state, and census region estimates, along with the 95 percent confidence (credible) intervals, are based on a survey-weighted hierarchical Bayes estimation approach and are generated by Markov Chain Monte Carlo techniques. For the "Total U.S." row, design-based (direct) estimates and corresponding 95 percent confidence intervals are given.
