CORE REQUIREMENTS FOR ALL MEASURES

- Data must be reported against a valid DCF contract using valid SAMH funding codes
- Outcome measures can only be computed for individuals that fall within a valid target population, and meet the requirements for a particular measure (e.g., only computing substance use measures for the substance abuse target populations).
- Output measures can include individuals that fall within a valid target population but are not included in outcome measures because the individual does not meet the requirements for a particular measure (e.g., individuals that receive non-treatment services such as assessment are not included in the stable housing measures).
- Service data must be tied to a valid mental health or substance abuse admission record.
- Report capabilities must be based on the following hierarchies
 - State and ME
 - Data analyses below the ME level can be run by the Department but will result in different findings from those calculated as part of this document because the formulas for this document consolidate each episode of care across network providers into an ME episode.
 - For example, an individual is served by two substance abuse providers within an ME network of care. The individual receives a service from Provider A on Monday and from Provider B on Tuesday. As far as output reporting is concerned, the ME served one individual. Performance measures for the individual would be based on the most recent evaluation. Thus, results would be reported ONLY for Provider B on behalf of the ME.
- Performance metrics for non-housing measures are not calculated on persons residing in institutional care. Non-housing performance metrics will be calculated once the individual is discharged from institutional care to the community.
- For individuals with co-occurring mental health and substance use disorders outcome records for both mental health and substance abuse are required as both types of records collect different information (this will be simplified in the future Financial and Service Accountability Management System but will still require data to be submitted for each program). Service events, however, are specific to a particular program in the Substance Abuse and Mental Health Information Systems. Please ensure that the particular program codes match the appropriate outcome record for a given provider.
 - As long as the budget and our approved General Appropriation Act measures are split by Substance Abuse and Mental Health we will need to continue reporting data separately.
- When possible, performance formulas have been reset to those first documented in the 2010-11 Long Range Program Plan (<http://floridafiscalportal.state.fl.us/Document.aspx?ID=2200&DocType=PDF>). Over the years, changes have been made to contract performance measures which deviated from the LRPP measures. There is a defined process for proposing changes to LRPP measures.
- All mental health measures will be based on the most recent record that is not an admission (e.g., periodic or discharge).
- When calculating performance measures each episode is treated separately. For example, a person is admitted in July and discharged in September. We'd calculate measures in September. If they have a second episode in December that ends in February we'd calculate results in February as well.

POPULATIONS

- Major diagnoses have been identified for each priority population. While all relevant character positions are listed for each diagnosis, the label for diagnoses may not be entirely replicated.
- For MENTAL HEALTH the most recent **PERIODIC** or **DISCHARGE** record is used to determine the population. Results for prior periods are stored so someone discharged in August and subsequently admitted and discharged in April will have two sets of results.
- For SUBSTANCE ABUSE the most recent **ADMISSION** or **DETOXIFICATION** record is used to determine the population.
 - Reason to use the ADMISSION rather than DISCHARGE is that we want to ensure that the diagnoses or substances of use are clearly identifiable. We have had situations where the discharge diagnosis indicates NO PROBLEM for a resolved substance related disorder. In those cases, we would incorrectly classify someone that would be considered, for example, as an Adult with Substance Abuse Problems as an Adult at Risk.
 - Results for prior periods are stored so someone admitted to treatment or detoxification in August and subsequently admitted to treatment or detoxification in April will have two sets of results.

Adult with Forensic Mental Health Involvement

1. Age at EVALUATION >= 18
2. And the person served has any one of the following LEGAL STATUS codes:
 - 16 (Release pending hearing – ITP)
 - 17 (Involuntarily hospitalized (direct commit) – ITP)
 - 18 (Incarcerated – ITP)
 - 19 (Involuntarily hospitalized – revocation of conditional release – ITP)
 - 21 (Conditionally released – ITP)
 - 23 (Involuntary hospital – revocation of conditional release – NGI)
 - 24 (Released pending hearing – NGI)
 - 25 (Conditionally released – NGI)
 - 26 (Incarcerated – NGI)
 - 29 (Incompetent to Proceed – Age 21 – NGI)

Adult with Severe and Persistent Mental Illness (SPMI)

1. Age at EVALUATION >= 18
2. And {receives SSI or SSDI due to a psychiatric disability (DISINCOM = 1 YES)}
3. Or ICD10PRIMARYCODE includes:
