Mission: Work in Partnership with Local Communities to Protect the Vulnerable, Promote Strong and Economically Self-Sufficient Families, and Advance Personal and Family Recovery and Resiliency
I. Background

In 2014, the Florida Legislature passed section 39.2015, Florida Statutes, which established requirements for creating a Critical Incident Rapid Response Team (CIRRT), effective January 1, 2015 (see Appendix 1-2 for more details).

II. Purpose

CIRRT reviews provide an immediate, multiagency investigation of child deaths that meet the statutory criteria for review or other serious incidents at the Secretary’s discretion. Reviews are conducted in an effort to identify root causes, rapidly determine the need to change policies and practices related to child protection and improving Florida’s child welfare system. CIRRT reviews take into consideration the family’s entire child welfare history, with specific attention to the most recent child welfare involvement and events surrounding the fatality, including the most recent verified incident of abuse or neglect.

III. Review of Child Fatality Data

From January 1, 2015, through June 30, 2019, a total of 117 CIRRT teams were deployed involving 119 child deaths. Of those deployments, 111 met the CIRRT requirement of having a verified report within the previous 12 months, while the other six reviews were completed at the direction of the Secretary. Of the six remaining deployments, three involved a recent history of physical abuse, two involved a recent history of substance misuse, and one team was deployed as there was an active investigation when the fatality occurred.

Since January 1, 2015, the fatalities resulting in a CIRRT deployment represent six percent of the overall fatalities reported to the Department of Children and Families’ (department) Florida Abuse Hotline (Hotline). An additional 33 percent of the fatalities reported to the Hotline met the criteria for a mini-CIRRT review (see Appendix 3). It should be noted that the chart below reflects the number of actual child fatalities. Some cases involve multiple victims; however, only one respective review was conducted.

Between January 1 and June 30, 2019, there were 69 child fatalities received that met the criteria for either a CIRRT deployment (nine) or mini-CIRRT review (60). For the nine CIRRT cases, there was no prior history involving the deceased child in three (33 percent) of the cases. In the 60 cases that met the criteria for a mini-CIRRT review, there was no prior history involving the deceased child in 26 (43 percent) of the cases.
The rate of occurrence for fatalities meeting the requirements for CIRRT deployments and mini-CIRRT reviews were lower in 2018 than 2017 and are currently tracking at or below the 2018 levels.

Standardized data is collected across all review types and entered into Qualtrics for further analysis and review. Reports on reviews conducted as a result of a child fatality (regardless of the type of review completed) are redacted according to Florida Statutes and posted for public review on the department's Child Fatality Prevention website.
(http://www.dcf.state.fl.us/childfatality/) after the death investigation has been completed. According to Florida Statutes, the information redacted is based on whether the death maltreatment has been verified by the department as a result of caregiver abuse or neglect. Reports listed on the website as “pending” are awaiting closure of the death investigation and, at times, the medical examiner’s findings.

Child deaths in Florida typically involve a child age three or younger and may involve a variety of causal factors including, but not limited to: sleep-related deaths, drownings, natural causes, inflicted trauma, Sudden Infant Death Syndrome (SIDS)/Sudden Unexplained Infant Death (SUID), and accidental trauma.

Of the 1,396 child fatalities that occurred during the 2015-2017 calendar years and were reported to the Hotline, 12 remain open; 10 at the request of law enforcement/state attorney due to on-going criminal proceedings and two were pending closure in the field. During this three-year period, the death maltreatment was verified in 322 (23 percent) of the closed cases. For the 438 child fatalities that occurred in 2018 and were reported to the Hotline, 43 currently remain open. Of the 395 closed 2018 child fatality investigations, 90 had verified findings for the death maltreatment. *

* It should be noted that findings for open cases have not yet been determined and may give the appearance of a decline in the number of verified reports until the official findings have been rendered
While the child death rate per 100,000 child population has remained flat over the past ten years, the rate of verified child death maltreatments per 100,000 child population reflects a downward trend.

III. Review of CIRRT Data

a. Summary of Second Quarter CIRRT Reports

During the second quarter, there were a total of four CIRRT deployments involving two of the six regions; one deployment to the Southeast Region and three deployments to the SunCoast Region. All four deployments occurred in counties where the sheriff’s office is responsible for completing child protective investigations. Two of the three deployments to the SunCoast Region were to Pinellas County and there was one deployment to Hillsborough County. The remaining deployment was to Broward County in the Southeast Region.

At the time of the fatality, three of the four families were receiving child welfare services. In one of the deployments, in-home non-judicial services were open on the child, found unresponsive in his crib, due to allegations of threatened harm, related to extensive history of parental substance abuse. Additionally, the sibling was open to out-of-home care services, with parental rights having been recently terminated on a sibling in another county. One child was receiving in-home judicial services due to concerns stemming from her extremely complex medical needs and passed due to natural causes in the home of her mother. One child was in a licensed foster home, receiving out-of-home-care supervision, and was found unresponsive in a crib in the foster home. The remaining case involved two brothers, ages five and six, who managed to gain access to the locked apartment complex swimming pool while playing outside unattended. The family was not open to services at the time of the incident; however, both children were previously removed and reunified with their mother after she successfully completed a case plan.
b. Past Maltreatment

During the 2019 calendar year, there were eight CIRRT deployments, involving nine victims, with each having a verified prior report on the victim or a sibling within the previous 12 months. There were two deployments, each, with a prior verified maltreatment of family violence threatens child, substance misuse, and physical abuse.

CIRRT Data by Region

From January 1 through June 30, 2019, there were eight CIRRT deployments, involving nine victims, occurring in five of the six regions. Four of the eight CIRRT deployments have been to the SunCoast Region. There was one deployment each to the Northwest Region, Central Region, Northeast Region and Southeast regions. Three of the SunCoast Region deployments occurred in Pinellas County and one in Hillsborough County, both of which have child protective investigations conducted by the sheriff’s office. Additionally, the deployment in the Southeast Region was to Broward County, where the sheriffs’ office conducts child protective investigations. The department is responsible for the completion of child protective investigations in the other counties where teams were deployed.
During the first two quarters of the 2019 calendar year, five of the eight CIRRT deployments have occurred in counties where a sheriffs' office is responsible for protective investigations.

c. Age of Victim

There were eight CIRRT deployments, involving nine victims, during the first two quarters of the 2019 calendar year, with six of the nine victims under the age of 1 year old. Remaining victims were 1-year, 5-years and 6-years of age.
Of those child fatalities occurring from January 2015 through June 2019 that were reported to the Hotline, 82 percent involved a child under the age of four. Similarly, 83 percent of all CIRRT deployments also involved children in this age group.

d. **Causal Factors**

Of the 1,384 closed child fatalities that occurred from January 1, 2015 to December 31, 2017, the four primary causal factors were sleep-related, drowning, natural causes, and SIDS/SUID. There are 12 child fatality investigations received during that time period that remain open. When finalized, they will have a slight impact on the overall numbers; however, there will be no change regarding the four primary causal factors.
Of the 395 closed child fatalities that occurred in 2018, the four primary causal factors were drowning, sleep-related, SIDS/SUID, and natural causes. There are still 43 child fatality investigations received during this time period that remain open which, when finalized, will impact the overall numbers and causal factor ranking.

![Causal Factors for Closed Investigations for Child Fatalities that Occurred 2015-2017](chart1)

![Causal Factors for Closed Investigations for Child Fatalities that Occurred in 2018](chart2)
The death maltreatment cannot be used as a stand-alone maltreatment; therefore, the underlying maltreatment that may have caused or contributed to the child death is noted. For an investigation to be closed with verified findings for the death maltreatment, there must be a preponderance of credible evidence that the child died as a result of a direct, willful act of the caregiver(s), or the caregiver(s) failed to provide or make reasonable efforts to provide essential care or supervision for the child. Credible evidence used to determine verified findings for the death maltreatment includes the medical examiner report, law enforcement reports, and medical records when necessary. For example, there were two deaths attributed to natural causes that were subsequently closed with verified findings of maltreatment. One case involved an infant who died due to complications of prematurity in which the baby’s pre-term birth could be directly linked to the mother’s cocaine use. The other case involved an infant who died of malnutrition as a result of the caregiver’s actions/inactions.

In cases where there may be insufficient evidence to support a verified finding of the death maltreatment, the investigation may still be closed with verified findings of other maltreatments.

Between January 1, 2015, and June 30, 2019, there were a total of 117 CIRRT deployments involving 119 child fatalities. Of the 109 investigations (involving 110 children) that were closed, 38 investigations (35 percent) involving 39 victims had verified findings for the death maltreatment; nine of the investigations remain open. An additional 21 investigations (19 percent) were closed with verified findings for maltreatment other than the death maltreatment, with inadequate supervision being verified in 12 of the cases and substance misuse was verified in eight of the cases. Multiple maltreatments can be verified in each investigation.
Between January 1, 2009, and June 30, 2019, the four leading causal factors of child fatalities reported to the Hotline were sleep-related (968), drowning (810), natural causes (751), and inflicted trauma (461).

Causal factors of child fatalities include the factors or situations leading to the death of the child. Sleep-related deaths include children found unresponsive, co-sleeping, or roll-overs. Causal factors for child fatalities due to natural causes include previously known medical issues or medically-complex children, as well as deaths due to previously undiagnosed medical issues. Reports are accepted by the Hotline for investigation when a child under the age of 5 is found deceased outside of a medical facility, and there is no indication of a known medical condition or a clear reason for trauma, such as a car accident. When a child dies in a hospital and abuse or neglect is suspected or, if the circumstances surrounding the death are unclear, a report of the death maltreatment will be accepted by the Hotline for investigation. The most common contributing factors of child fatalities coded as “other” are suicide, drug toxicity, accidental strangulation/choking, and house fires.

Although maltreatment findings were noted to be appropriate for the majority of the investigations, the investigations with a causal factor of SIDS/SUID and several of the investigations with a causal factor of Undetermined were inappropriately closed with a verified finding of the death maltreatment. In those cases, the findings were based solely on the surrounding circumstances (e.g., possible unsafe sleep environment, bedding, or position, etc.) as opposed to a medical examiner’s finding of fact.
IV. CIRRT Advisory Committee

The CIRRT Advisory Committee (Committee) is statutorily-required to meet on a quarterly basis. The Committee met most recently on June 27, 2019. Committee members may participate via conference call but are encouraged to attend in person. The meeting notices are published, and the meetings are open to the public. The primary focus of the Committee is to identify statewide systemic issues and provide recommendations to the department and legislature that will improve policies and law related to child protection and child welfare services.

At the June 27, 2019 meeting, the committee discussed information in reports that can be released, when there is a request from the media or public, prior to the determination of findings and closure of the death investigation. Per statute, reports are redacted prior to release. The committee discussed multiple pieces of information that is gathered, and types of reports written when there is a child fatality including CIRRT reports which are a systemic look at prior history; the law enforcement report, which addresses potential criminal actions; the child fatality abuse investigation; and the Child Death Review report. The committee discussed that the general public may not have a clear understanding on the type of information contained in the CIRRT report.

The committee discussed the need for additional training for staff, at multiple levels, surrounding cases involving unexplained head or serious injuries of young, non-verbal children. It was noted that there is a lack of understanding regarding when in-home safety plans are appropriate, and that they should not be used in cases where there is an unknown perpetrator with a significant injury to a young child. The committee discussed the need for multi-disciplinary staffings, with participation from all professionals and parties involved in these serious injury cases.
APPENDIX 1 – Section 39.2015, Florida Statutes

Section 39.2015, Florida Statutes, effective January 1, 2015, requires:

- An immediate onsite investigation by a CIRRT for all child deaths reported to the department if the child or another child in his or her family was the subject of a verified report of abuse or neglect during the previous 12 months.
- The investigation shall be initiated as soon as possible, but no later than two business days after the case is reported to the department.
- Each investigation shall be conducted by a multiagency team of at least five professionals with expertise in child protection, child welfare, and organizational management. The majority of the team must reside in judicial circuits outside the location of the incident. The Secretary is required to assign a team leader for each group assigned to an investigation.
- A preliminary report on each case shall be provided to the Secretary no later than 30 days after the CIRRT investigation begins.
- The Secretary may direct an immediate investigation for other cases involving serious injury to a child and those involving a child fatality that occurred during an active investigation.
- The Secretary, in conjunction with the Florida Institute for Child Welfare, is required to develop guidelines for investigations and provide training to team members.
- The Secretary shall appoint an advisory committee made up of experts in child protection and child welfare.
- Legislative changes, effective July 1, 2015, require the Committee to meet and submit reports quarterly to the Secretary. The Secretary will submit the quarterly reports to the Governor, the Speaker of the House, and the President of the Senate.
- Beginning in the 1998-1999 fiscal years, and under section 39.3065, Florida Statutes, the department transferred all responsibility for child protective investigations to the sheriffs’ offices in Broward, Hillsborough, Manatee, Pasco, Pinellas, Seminole, and Walton Counties*. The department is responsible for child protective investigations in the remaining 60 counties.
- As intended in section 409.986, Florida Statutes, the department provides child welfare services to children through contracts with community-based care lead agencies for each of the 20 judicial circuits in the state.

* The sheriff’s office in Walton county assumed responsibility for child protective investigations effective July 1, 2018.

APPENDIX 3 – CIRRT Process

Prior to conducting CIRRT reviews, the department began actively recruiting staff from partner agencies to receive CIRRT training in preparation for participating in CIRRT reviews. Since that time, training has been offered every three months at various locations throughout the state, with the exception of the December 2018 training which was cancelled due to travel restrictions. The most recent training was held in Jacksonville in April 2019. To date, a total of 568 professionals with expertise in child protection, domestic violence, substance abuse and mental health, law enforcement, Children’s Legal Services, human trafficking, and the Child Protection Team have been trained on the CIRRT process. Training consists of one day of specialized training on the child welfare practice model for external partners, along with two additional days of specialized CIRRT training.

Advanced training was developed and is provided for individuals identified as team leads. In addition, specialized one-day training was created specifically for the Child Protection Team medical directors to meet the statutory requirement that went into effect July 1, 2015, requiring medical directors to be a team member on all CIRRTs (section 39.2015(3), Florida Statutes).

Team Composition

Each team deployed is comprised of individuals with expertise in the appropriate areas, as identified through a review of the family’s prior history with the child welfare system. The team lead is responsible for guiding the process throughout the duration of the review.

Child Fatality Review Process

Every case involving a child fatality receives a specified level of a quality assurance review. A child fatality review is completed by the region’s child fatality prevention specialist on every case involving a child fatality, followed by a written Child Fatality Summary that outlines the circumstances surrounding the incident. For cases in which there is no prior child welfare history involving the family within the five years preceding the child’s death, this is the only report that is written.

For cases in which there was a verified prior report involving the deceased child or a sibling within 12 months of the death, a review is conducted utilizing the CIRRT process. While only a small percentage of cases meet the criteria for this extensive review, an in-depth review that mirrors the CIRRT process is completed on all other cases involving families with child welfare history within the five years preceding the child’s death, regardless of findings. These reviews are commonly referred to as mini-CIRRTs and, like the CIRRT reports, are used to supplement the information contained in the Child Fatality Summary.
